

Based on the given table , I 'll fill in the entities masked by [ENT]. The entity [ENT] seems to represent the " home team " or " away team " in each game . The sentence with the masked entities filled in is : the team only scored zero 3 time out of all game . However , it seems that the sentence doesn 't make sense in this context . It would be more logical to fill in the entities based on the game information . Here 's an alternative sentence with the entities filled in : the team only scored zero 3 times as the home team and 0 times as the away team out of all games . However , I noticed that the team scored zero three times as the away team , and this is the only instance where this occurred . The sentence could be rewritten to reflect this : the away team scored zero three times out of all games . If you 'd like to stick with the original sentence , I can fill in the entities accordingly . Here 's the revised sentence : the [home team] only scored zero 3 time out of all game . If you have any further clarification or details , please let me know !
