Based on the table provided, the sentence "a total of 5 [ ENT ] had an [ ENT ] that was higher than 1 0 . 0 0 point " can be filled in as follows : " a total of 5 ** matches ** had a ** crow d ** that was higher than 1 0 , 0 0 0 ." Here 's the reasoning : - The table lists multiple matches , so the entity [ ENT ] in the first instance refers to " matches ". - The table includes a column for " crow d ", which indicates the number of people attending each match . Therefore , the entity [ ENT ] in the second instance refers to " crow d ". - The sentence implies that the crowd size is being compared , and since the table provides crowd numbers in the thousands , we compare to 1 0 , 0 0 0 instead of 1 0 . 0 0 point .
