To fill in the masked entities, we need to iterate through the table and find the corresponding entity for each masked position in the sentence. Given sentence: " 3 team earned 6 win in match against [ENT] af c ." The masked entity is [ENT], which is the third position in the sentence. We can see from the table that the third team in the " opponents " column is " ge f le if " in the first row. So, the sentence with the masked entity filled in is : " 3 team earned 6 win in match against gef le if af c ."
